

ABSTRACT

5 A scanning device for scanning to a host computer includes memory for storing a list of host IDs and corresponding host addresses, an image sensing module for scanning an image or document, and a display panel for displaying at least one host ID that is selectable via user input. The scanning device receives registration data from a host computer, displays a list of one or more registered host computers, receives user input identifying a host computer, scans a document or image to generate scan data, and transmits the scan data to the host computer identified by the user input.
